Allowance of Application # 09/729,533

1. The following communication is in response to applicant's remarks received 4-August-2005.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 5,729,345 to Ludewig et al., the improvement comprising a method for controlling distortion of a material during a weld process, wherein distortions produced by the weld process are modeled, and a plurality of simulated induced distortions in the model are determined to offset the produced distortions. The invention then generates a plurality of actual induced distortions in the material as a function of the simulated induced distortions, and performs the weld process on the material. This patentable distinction is included in each of the independent claims, nos. 1, 8, 10, and 14. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for controlling distortion of a material during a weld process, using a plurality of simulated induced distortions in the model to offset the produced distortions and generating a plurality of actual induced distortions in the material as a function of the simulated induced distortions> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 3, line 24 through page 10, line 24, and Figures 1-7. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
